PROFESSIONAL SUMMARY

Full Stack Developer with 6+ years of experience building scalable web applications using React, Next.js, and Node.js. Successfully delivered enterprise-grade systems for Station Casinos serving 50,000+ users across R Systems and GenAquarius, owning feature development from end to end and improving page load times by ~40%. Proven track record of developing reliable web products, optimizing microservice backends, setting up automated CI/CD pipelines, and integrating Generative AI features to automate workflows.

TECHNICAL SKILLS

Languages:	JavaScript, TypeScript, HTML5, CSS3, SQL, PHP
Frontend:	React.js, Next.js, Vue.js, Redux, Tailwind CSS, Material UI, Bootstrap, Sass/SCSS, Responsive Design
Backend:	Node.js, NestJS, REST APIs, GraphQL, Microservices, MongoDB, MySQL, PostgreSQL, RabbitMQ, Kafka
Tools & Practices:	Azure DevOps, AWS, GCP, CI/CD, Jest, Postman, Stoplight, APIM, JSON, Agile/Scrum, Code Review
Generative AI:	LLM Integration, RAG, Prompt Engineering, AI Feature Development, Claude, GitHub Copilot, ChatGPT

WORK EXPERIENCE

Senior Full Stack Developer — GenAquarius

Remote · **Feb 2026 – Mar 2026** *(Role concluded due to client account downsizing & budget constraints)*

- Design and integrate features, including LLM and RAG pipelines, to automate workflows, and build an interactive chatbot.
- Lead continued development of the Station Casinos Labor System following its migration from R Systems, ensuring uninterrupted functionality and ongoing feature delivery.
- Build and maintain full-stack web applications with React.js, Next.js, and Node.js — creating reusable UI components and integrating REST APIs.
- Design data flows for workforce scheduling and labor-volume tracking, and optimize application performance.

Senior Software Developer — R Systems

Noida, India · **Dec 2021 – Oct 2025**

- Architected frontend features for enterprise casino management platforms (50,000+ users) using Next.js Microfrontends (Shell + iframe apps) with independent deployment cycles.
- Engineered inter-microfrontend communication using `window.postMessage` and a custom Messaging Service to handle context sharing, events, and navigation.
- Designed event-driven NestJS backend microservices with RabbitMQ for background processing (Rating, Awards, Jackpot) and versioned REST APIs (v1/v2/v3).
- Integrated third-party services (Konami, GAN, IGT, Trustly payment webhooks, CaseIQ) via isolated Adapter Microservices to decouple business logic.
- Implemented Azure AD B2C authentication, OTP verification, JWT access/refresh token rotation, and Axios interceptors for header injection and error handling.
- Created a shared private npm library providing reusable React hooks, auth/customer context providers, and UI components across microfrontends.
- Cut page load by ~40% and API response time by ~30% using Next.js SSR, runtime environment configs (`__ENV.js`), code-splitting, and caching.
- Established CI/CD pipelines in Azure DevOps, wrote Jest tests (~80% coverage), and mentored developers in Agile sprints.

Software Developer (Contract / Consultant) — Independent / Client Projects

Remote · **Feb 2021 – Nov 2021**

- Engineered responsive frontend interfaces using React.js, JavaScript, and HTML5/CSS3 across e-commerce applications and educational course portals (including CollegeVidya project support).
- Customized dynamic WordPress templates and PHP modules, integrating REST APIs for streamlined user data flow.
- Optimized component rendering performance, state management, and cross-browser responsiveness across multi-device applications.

Front End Developer — Virtual Employee

Noida, India · **Mar 2019 – Jan 2021**

- Developed interactive front-end components and responsive web applications using React.js, JavaScript (ES6+), HTML5, and CSS3.
- Customized WordPress themes and built dynamic content templates with PHP, managing source code with Git.
- Improved page stability and performance through automated testing and JavaScript optimizations, reducing cross-browser bugs by 20%.

Web Developer — Young & Shand Technologies

Noida, India · **Sep 2018 – Feb 2019**

- Built responsive web layouts and landing pages using HTML5, CSS3, Bootstrap, Tailwind CSS, JavaScript, and PHP.
- Designed and customized client websites (including travel portals) from UI mockups, ensuring mobile responsiveness and browser compatibility.
- Collaborated with design and development teams to implement clean code standards and layout optimizations.

PROJECTS

Station Casinos — Enterprise Management Platform (R Systems → GenAquarius)

- **Microfrontend Architecture:** Architected Next.js microfrontend modules hosted inside a central Shell application using iframes, enabling independent team deployments and releases without cross-app risk.
- **Inter-Iframe Messaging Service:** Built a custom Messaging Service leveraging `window.postMessage` API for secure cross-iframe communication, event dispatching, customer context syncing, and cross-app navigation.
- **Event-Driven NestJS Microservices:** Developed NestJS backend microservices utilizing RabbitMQ event streams for asynchronous background tasks (Rating, Awards, Jackpot, Customer Sync) alongside versioned REST APIs (v1/v2/v3).
- **Adapter Microservice Pattern:** Isolated third-party gaming and payment integrations (Konami, GAN, IGT, Trustly webhooks, CaseIQ) using adapter microservices to decouple external API dependencies.
- **Shared Library & Auth:** Authored a shared private npm library containing reusable React hooks, auth/customer context providers, and Axios interceptors for Azure AD B2C JWT token handling.
- **Runtime Configuration:** Implemented runtime environment loading via `__ENV.js` to enable property changes across deployment environments without rebuilding application containers.

College Vidya — Course Portal & University Finder (Independent Support Project)

- Engineered reusable React.js UI components for course cataloging, side-by-side university comparison grids, fee breakdowns, and multi-step inquiry forms.
- Contributed to AI-driven university recommendation features, student lead form validation logic, and responsive mobile layout optimizations.

EDUCATION

Bachelor of Technology, Computer Science — Uttarakhand Technical University (UTU)

Dehradun, India · 2013 – 2017
